

DOE-ID NEPA CX DETERMINATION

SECTION A. Energy **Project Title:** Fiber Sensor Fused Additive Manufacturing for Smart Component Fabrication for Nuclear

SECTION B. Project Description

The University of Pittsburg, in collaboration with the Oak Ridge National Laboratory, Westinghouse Electric Company, and Corning Incorporated, proposes to develop an integrated additive manufacturing (AM) model and fiber embedding technology that will integrate reactor modular manufacturing and sensor installation in a single manufacturing step. This research will be accomplished by the following tasks: (1) simulation of AM process to optimize fiber sensor embedding; (2) develop new specialty optical fibers and innovative fiber metal coating; and (3) fabrication, embedding, and testing of sensor-fused smart components.

SECTION C. Environmental Aspects / Potential Sources of Impact

The university has procedures in place to handle any waste that will be generated through this project. The action would not create additional environmental impacts above those already permitted at the university.

SECTION D. Determine the Level of Environmental Review (or Documentation) and Reference(s): Identify the applicable categorical exclusion from 10 CFR 1021, Appendix B, give the appropriate justification, and the approval date.

Note: For Categorical Exclusions (CXs) the proposed action must not: 1) threaten a violation of applicable statutory, regulatory, or permit requirements for environmental, safety, and health, including requirements of DOE orders; 2) require siting and construction or major expansion of waste storage, disposal, recovery, or treatment facilities; 3) disturb hazardous substances, pollutants, contaminants, or CERCLA-excluded petroleum and natural gas products that pre-exist in the environment such that there would be uncontrolled or unpermitted releases; 4) adversely affect environmentally sensitive resources. In addition, no extraordinary circumstances related to the proposal exist which would affect the significance of the action, and the action is not "connected" nor "related" (40 CFR 1508.25(a)(1) and (2), respectively) to other actions with potentially or cumulatively significant impacts.

References: B3.6 Siting, construction, modification, operation, and decommissioning of facilities for small-scale research and development projects; conventional laboratory operations (such as preparation of chemical standards and sample analysis); and small-scale pilot projects (generally less than 2 years) frequently conducted to verify a concept before demonstration actions, provided that construction or modification would be within or contiguous to a previously disturbed or developed area (where active utilities and currently used roads are readily accessible). Not included in this category are demonstration actions, meaning actions that are undertaken at a scale to show whether a technology would be viable on a larger scale and suitable for commercial development.

Justification: The activity consists of university-scale research activities to develop an integrated additive manufacturing model and fiber embedding technology that will integrate reactor modular manufacturing and sensor installation.

Is the project funded by the American Recovery and Reinvestment Act of 2009 (Recovery Act) Yes No

Approved by Jason Sturm, DOE-ID NEPA Compliance Officer on 8/27/2020
