DOE-ID NEPA CX DETERMINATION

Page 1 of 1

CX Posting No.: DOE-ID-13-066

Due to 4 Title. Volidation Comparing of Structural Materials for Advanced Superposition Corbon Disvide F	Draudan
SECTION A. Project Title: Validation Corrosion of Structural Materials for Advanced Supercritical Carbon-Dioxide E Cycle – University of Wisconsin	srayton
SECTION B. Project Description	
The University of Wisconsin proposes to study the supercritical carbon-dioxide (SC-CO ₂) Brayton cycle to address key mate corrosion and related challenges, identify appropriate materials, and advance the body of scientific knowledge in the area of temperature SC-CO ₂ corrosion.	
SECTION C. Environmental Aspects / Potential Sources of Impact	
The research would involve evaluating materials in a high temperature SC-CO ₂ environment. The action would not create an environmental impacts above those already occurring at the university.	dditional
SECTION D. Determine the Level of Environmental Review (or Documentation) and Reference(s): Identify the applica categorical exclusion from 10 CFR 1021, Appendix B, give the appropriate justification, and the approval date.	
Note: For Categorical Exclusions (CXs) the proposed action must not: 1) threaten a violation of applicable statutory, regulatory, or permit requirements for environmental, safety, and health, including requirements of DOE orders; 2) require siting and construction or major expresses uses storage, disposal, recovery, or treatment facilities; 3) disturb hazardous substances, pollutants, contaminants, or CERCLA-excluded and natural gas products that pre-exist in the environment such that there would be uncontrolled or unpermitted releases; 4) adversely affect environmentally sensitive resources. In addition, no extraordinary circumstances related to the proposal exist which would affect the significant impacts.	eansion of petroleum ct ificance of
References: B3.6 Siting, construction, modification, operation, and decommissioning of facilities for small-scale research are development projects; conventional laboratory operations (such as preparation of chemical standards and sample analysis); a scale pilot projects (generally less than 2 years) frequently conducted to verify a concept before demonstration actions, provi construction or modification would be within or contiguous to a previously disturbed or developed area (where active utilities currently used roads are readily accessible). Not included in this category are demonstration actions, meaning actions that an undertaken at a scale to show whether a technology would be viable on a larger scale and suitable for commercial development.	and small- ided that es and re
Justification: The activity consists of evaluating materials in a high temperature SC-CO ₂ environment for research purposes	

Is the project funded by the American Recovery and Reinvestment Act of 2009 (Recovery Act) Yes No

Approved by Jack Depperschmidt, DOE-ID NEPA Compliance Officer on 11/21/2013
