

DOE-ID NEPA CX DETERMINATION

SECTION A. Project Title: Multipurpose High-Resolution X-Ray Diffractometer for Nuclear Energy Research and Education – University of Tennessee

SECTION B. Project Description

The University of Tennessee will purchase an advanced X-ray diffractometer (XRD) system to add capabilities allow researchers to examine and quantify materials behavior upon exposure to extreme conditions such as radiation, corrosion, and mechanical deformation.

SECTION C. Environmental Aspects / Potential Sources of Impact

Water/Well Use – Water will be circulated through the chiller to cool down the anode tube.

Chemical Use/Storage – Organic solvents like acetone, isopropanol, methanol, and ethanol will be used to clean sample holders.

SECTION D. Determine the Level of Environmental Review (or Documentation) and Reference(s): Identify the applicable categorical exclusion from 10 CFR 1021, Appendix B, give the appropriate justification, and the approval date.

Note: For Categorical Exclusions (CXs) the proposed action must not: 1) threaten a violation of applicable statutory, regulatory, or permit requirements for environmental, safety, and health, including requirements of DOE orders; 2) require siting and construction or major expansion of waste storage, disposal, recovery, or treatment facilities; 3) disturb hazardous substances, pollutants, contaminants, or CERCLA-excluded petroleum and natural gas products that pre-exist in the environment such that there would be uncontrolled or unpermitted releases; 4) adversely affect environmentally sensitive resources. In addition, no extraordinary circumstances related to the proposal exist which would affect the significance of the action, and the action is not “connected” nor “related” (40 CFR 1508.25(a)(1) and (2), respectively) to other actions with potentially or cumulatively significant impacts.

References: B3.6 Siting, construction, modification, operation, and decommissioning of facilities for small-scale research and development projects; conventional laboratory operations (such as preparation of chemical standards and sample analysis); and small-scale pilot projects (generally less than 2 years) frequently conducted to verify a concept before demonstration actions, provided that construction or modification would be within or contiguous to a previously disturbed or developed area (where active utilities and currently used roads are readily accessible). Not included in this category are demonstration actions, meaning actions that are undertaken at a scale to show whether a technology would be viable on a larger scale and suitable for commercial development.

Justification: The activity consists of the purchase of equipment for research and teaching purposes.

Is the project funded by the American Recovery and Reinvestment Act of 2009 (Recovery Act) Yes No

Approved by Jack Depperschmidt, DOE-ID NEPA Compliance Officer on 10/24/2013
