

LINE Commission Visits Idaho National Laboratory

Members of the state of Idaho's Leadership in Nuclear Energy (LINE) Commission recently visited the Idaho National Laboratory and related DOE-Idaho cleanup facilities. These photos show commission members at the Materials and Fuels Complex, where Steve Marschman from INL talks to the commission members, and the Advanced Mixed Waste Treatment Facility. At the AMWTP, members saw the supercompactor as Facility Manager Jeremy Hampton explained how it worked. Participants included, from top right in the INL: INL Laboratory Director John Grossenbacher; North Wind Group President Sylvia Median; former Idaho U.S. Senator Larry Craig; Idaho Department of Labor's Dwight Johnson; BEA Government Affairs Boise Manager Brian Whitlock; and Idaho House District 33 Rep. Jeff Thompson.

The mission of the commission is to improve relations between the state and INL, and increase interaction in areas like mission development, technology transfer, economic development and education.
